

Math 2260 Quiz 14.5 (Practice)

Name _____

Points will be deducted for untidy or disorganized answers

1. (2 points) For what values of x does the infinite series

$$\sum_{n=1}^{\infty} \left(\frac{1-x}{2} \right)^n$$

converge and find the sum of the series (as a function of x) for those values of x .

2. (3 points) Determine which of the follow series converge, and which diverge. Give reasons for your answer. If the series is convergent, find its sum.

(a)

$$\sum_{n=1}^{\infty} (-1)^{n-1} \frac{3}{2^n}$$

(b)

$$\sum_{n=1}^{\infty} \left(\frac{5}{2^n} - \frac{1}{3^n} \right)$$

(c)

$$\sum_{n=1}^{\infty} \left(1 - \frac{1}{n} \right)^n$$
