Please comment briefly on specific aspects of this instructor's teaching which in your opinion particularly deserve praise and criticism such as assignments, grading, testing, methods of instruction, enthusiasm, etc.:

He was always willing to answer questions and help us with anything that we needed. He was generous in giving partial credit also.

He was very helpful, and made calculus seem a lot easier than it actually is. I learned a lot in his class only because of the way he taught it. I took calc my freshmen year and dropped it because my teacher was so hard to understand.

I always felt well prepared for the tests and quizzes.

I have been in college for 7 years (4 years of undergrad, 2 for my Masters, and 1 completed towards my PhD). During this time I have encountered many excellent instructors/professors. Phil happens to be one of the best instructors I have ever had. He is able to convey complicated material in a very

organized and comprehensible manner. He also provides feedback in a timely manner.

messes up on the board with numbers and signs frequently

Phil Bergonio has been the best math teacher I have ever had. I took precalculus last semester and almost didn't pass. This semester with such a great teacher I might finish the course with a B or higher. I have never had a teacher try so hard to ensure that every student understands the material.

Phil helped me out a lot. i actually felt like I knew what was going on instead of just doing things because that is what the book said to do.

Phil is a great guy, and has great enthusiam while teaching.

Phil is an excellent teacher! He breaks down the material and explains it very well to help his students gain understanding. He does a great job of explaining why specific theorms or concepts work to aid in understanding. I would recommend Phil to anyone else taking Calculus because he is a great teacher who takes the time and effort to help his students succeed.
