

## REVIEW PROBLEMS FOR SECOND 3200 MIDTERM

PETE L. CLARK

- 1) a) State Euclid's Lemma (the one involving prime numbers and divisibility).  
b) Use Euclid's Lemma to show that  $3^{1/5}$  and  $5^{1/3}$  are both irrational.
- 2) Let  $x, y \in \mathbb{Z}$ , and suppose that  $x$  is of the form  $9k + 3$  for some integer  $k$ .  
a) Show that  $2x^2 + 54y$  is divisible by 9.  
b) Show that  $2x^2 + 54y$  is not divisible by 27.
- 3) Let  $x \in \mathbb{Z}$ . Prove or disprove each of the following statements:  
a) If  $4 \mid x^2$ , then  $4 \mid x$ .  
b) If  $5 \mid x^2$ , then  $5 \mid x$ .
- 4) Let  $r \neq 1$  be a real number. Show that for all  $n \in \mathbb{Z}^+$ ,  $1 + r + \dots + r^n = \frac{r^{n+1} - 1}{r - 1}$ .
- 5) Show that for all  $n \in \mathbb{N}$ ,  $3 \mid n^3 + 2n$ . Hint: use induction.
- 6) A student has been asked to prove:  $\forall x \in \mathbb{Z}, P(x) \implies Q(x)$ .<sup>1</sup> For each of the following openers, comment on the proof technique, or explain why it is not a valid proof technique.

Example: "Let  $x \in S$ , and suppose  $P(x)$  is true."

Comment: This is the beginning of a direct proof.

- a) "Let  $x \in S$ , and suppose  $P(x)$  is false."
  - b) "Let  $x \in S$ , and suppose that  $Q(x)$  is true."
  - c) "Let  $x \in S$ , and suppose  $Q(x)$  is false."
  - d) "Let  $x = 1$ . Then" [the student shows that  $P(1)$  is true and  $Q(1)$  is true].
  - e) "Let  $x = 2$ . Then" [the student shows that  $P(2)$  is false and  $Q(2)$  is false].
  - f) "Let  $x = 3$ . Then" [the student shows that  $P(3)$  is true and  $Q(3)$  is false].
  - g) Let  $x \in S$ , and suppose that  $P(x)$  is true and  $Q(x)$  is false.
- 7) a) State the principle of mathematical induction and the principle of strong/complete induction.  
b) True or false: Suppose that for  $P(x)$  is an open sentence with domain the real numbers. Then it is simply not possible to use mathematical induction to show that for all  $x \in \mathbb{R}$ ,  $P(x)$  holds.
  - 8) Let  $x \geq 1$  be a real number. Show that for all  $n \in \mathbb{Z}^+$ ,  $(1 + x)^n \geq 1 + nx$ . When does equality hold?

---

<sup>1</sup>Here  $P(x)$  and  $Q(x)$  are sentences involving an arbitrary integer  $x$ .

- 9) Define a sequence of positive integers  $x_n$  by  $x_1 = 1$ ,  $x_2 = 2$ , and for all  $n \geq 1$ ,  $x_{n+2} = 2x_{n+1} - x_n$ . Find a simple closed-form expression for  $x_n$  and prove it by strong induction.
- 10) Let  $A$  be a set. Prove or disprove: if for every set  $B$ ,  $A \setminus B = \emptyset$ , then  $A = \emptyset$ .
- 11) Prove or disprove:
- a) For all rational numbers  $a$  and  $b$ ,  $a + b$  and  $ab$  are both rational.
  - b) For all irrational (real) numbers  $a$  and  $b$ ,  $a + b$  is irrational.
  - c) For all irrational (real) numbers  $a$  and  $b$ ,  $a + b$  is rational.
  - d) For all irrational (real) numbers  $a$  and  $b$ ,  $ab$  is irrational.
  - e) For all irrational (real) numbers  $a$  and  $b$ ,  $ab$  is rational.
